

MICHIGAN Pediatric Therapy

A Path Forward

Michigan Pediatric Therapy stands as a beacon of hope and healing for families, offering unwavering support and expert guidance on the journey toward your child's success.

Occupational Therapy

Whether your child requires support in handwriting, feeding, social skills, motor coordination, or sensory sensitivities, our therapy sessions led by licensed occupational therapists are designed to promote growth and development.

Feeding Therapy

We guide children and their caregivers through picky eating, breastfeeding, bottle feeding, and transitioning to solids. Recognizing and addressing feeding issues early is crucial and involves understanding the intricacies of their sensory experiences, oral-motor skills, and the dynamics of their feeding environment.

Speech Therapy

Our licensed speech-language pathologists are committed to improving your child's communication skills. Whether your child is already speaking in sentences, using single words, pointing, or simply crying, our goal is to help them progress to the next level.

Sensory Integration Therapy

We recognize that the vestibular, proprioceptive, and tactile systems are highly nuanced and can profoundly impact a child's behavior and development. We help children and caregivers navigate sight, sound, taste, touch, and movement sensitivities.

Oral-Motor Therapy

We evaluate for weaknesses, tone irregularities, and asymmetries that can significantly impact feeding and speaking. Through personalized, targeted interventions, we implement a variety of strategies to strengthen weak areas and ensure symmetrical movement.
